

Carbon Footprint scope 1 and 2

Report template name	CF Scope 1 & 2 (based on EMAS)	
Report template ID		
Scope	Organization	
Myrmex Segment	Environmental performance	
Usage	<input checked="" type="checkbox"/> Internal	External
Version date	06/03/2017	
Derived reports and consolidations		

Myrmex Website Report Summary Sheet

Context

Organisations with a proactive approach to environmental challenges look for ways to continually improve their environmental performance and to communicate their environmental achievements to stakeholders and society in general. Organisations participating in Carbon footprint assessment and reporting may gain added value in terms of regulatory control, cost savings and public image provided they are able to demonstrate an improvement of their environmental performance.

Yet Carbon footprint assessment of an organisation as well as reporting and its follow-up require willingness, effort and time.

This is where Myrmex and this report template come in to help. Myrmex provide a means for organisations to facilitate access to information, to manage environmental impact and to measure and monitor on an annual basis their overall environmental performance by identifying key impacts and following up key performance Indicators. Moreover, Myrmex facilitates the audit and verification process by giving collaborative access to auditors and verifiers on your organisation's dashboard.

To ensure relevance and comparability of the information, Myrmex reports on the organisations' environmental performance based on generic performance indicators such as carbon footprint. This should help organisations compare their environmental performance both over different reporting periods and with the environmental performance of other organisations.

What this report is about

Myrmex carbon footprint report focus on greenhouse gases direct emissions (scope 1) and indirect emissions related to energy (scope 2) generated by the organisation. Scope 3 GHG emissions are not addressed in this report.

You may apply this report template to your own organisation (internal mode), in order to assess and report your organisation scope 1 and scope 2 GHG emissions.

GHG emissions indicators contained in this report are based on energy-related indicators highlighted in the “EMAS – Environmental performance” report template meaning that responding first the “EMAS – Environmental performance” report template will automatically populate numerous indicators in “CF Scope 1 & 2” report.

Emission factors sources

Emission factors are drawn from multiple sources:

	Sources
Fuel	Department of Energy & climate Change (Defra,2016)
Electricity	Base Carbone (Ademe, 2016)
Heating	Department of Energy & climate Change (Defra,2016)
Steam	Department of Energy & climate Change (Defra,2016)
Cooling	Department of Energy & climate Change (Defra,2016)
Refrigerants	Department of Energy & climate Change (Defra,2016)
